

To Whom It May Concern
24/08/2011

I Craig Thompson from Tex Onsite have had a visit Synergy Scaffolding to test the 10mm Foamex sheeting used as a barrier from the 1500V rail lines.

Upon testing this we tested the sheet at 5Kv for 1 min which passed fine only leaking 20mA once this test was completed we then continued on to test the sheet to find out it fail point this did happen once we hit 40Kv, this blow a hole through the sheet after about 30secs.

Should you require any further information on this please feel free to contact me anytime.

Kind Regards,

Craig Thompson
