IMPORTANT: It is the operator's duty to inspect the components for damage before each use. Avoid contact with acid as this will damage the aluminium beyond repair. Avoid leaving the platform out under constant sun's light and rain to prevent delamination.

Note: The double width tower sold does not have an inbuilt ladder. Ladders are sold separately.

1. Insert the adjustable wheels into the legs of the frame. Lock the wheels with the lock pins, and brakes.

2. Position the ladder frame as shown. Lock the wheels, and clip the horizontal braces onto the rungs to square the scaffold.

3. Clip on diagonal braces onto the lowest rung in opposing directions. Ensure to lock them entirely. Frame is now self supporting.

4. Locate the platform on 2nd rung (approx 1.0m) high. Ensure scaffold is level using a spirit level.

5. Install the next set of diagonal braces. Add next lift of 5 rung ladder frames.

6. Install the platform on 5th rung (approx 2.0m)

7. Add the adjustable stabilisers, then lock them entirely. Do not climb the platform until fully guardrailed.

8. Continue steps 5 and 6 until required working height is reached. Erect guardrails and horizontal braces. Guardrails should extend 1.0m past the platform in all cases. Do not climb to next platform until it is fully guardrailed.

9. Fit toeboards to all working platforms. Install ladders to all platforms.

A typical 6.0m high Wide Scaffold

Other Sizes and Combinations Available

- Horizontal Brace (Yellow)
- Toeboards
- Diagonal Brace (Blue)
- Adjustable Stabiliser
- 5 Rung Ladder Frame
- 8" Castor Adjustable Wheel
- Platform with Hatch
- Platform with Hatch
- Horizontal Brace
- Ladders omitted for clarity.
