

Your safety is important.

Synergy's handrail kit provides a safety barrier minimising the risk of falls from the side of trestles.

Our kit can be set up on one side of the trestles when working against a wall or roof at different heights and lengths.

You can also use our kit as a single bay or as a multiple bay system to create a continuous and stable working platform.

Individual Components

A Frame Hand Rail Post

Mounts easily over any two rungs of the trestle, allowing the platforms to be used at any required height. Hand rail end lowers the risk of walking off the end of the working platform.

(Kit includes left & right Posts)

Telescopic Hand Rail For A Frame Trestle

Synergy's telescopic heavy duty hand rails start from as little as 2.5m to 4.7m and ensure an easy link between two hand rail posts.

A Frame Trestle Stabiliser

Synergy's aluminium A Frame trestle creates additional support against the working face. Telescopic tube from 2.4m to 4.1m.

A Frame Diagonal Brace

Synergy's aluminium A frame trestle diagonal brace prevents the trestle from folding.
